

BUILD BOOK

PZL-104 WILGA 35

wingspan: 3,95 m • length: 2,7 m • engine: Fiala VM 250 radial (or at least 160cc) • weight: 20 kg

BUILD BOOK

Thank you for buying this kit and wish you a pleasant building.

All parts from ply 6 mm

Use laser line to straighten all parts

wingspan: 3,95 m • lenght: 2,7 m • engine: Fiala VM 250 radial (or at least 160cc) • weight: 20 kg

In case of using standard tail wheel holder you can do this

carbon fiber plates and instrumental panel

laser cut parts from ply 0,8 mm

IMPORTANT: at sides inside glued reinforcement
- spruce 15x30mm and well glued tube casing

Rudder

cover rudder with light balsa 1,5 mm

Elevator

cover elevator with light balsa 1,5 mm

mini servo cases for elevator

servo wires hide under balsa surface. it's better :-)

cover fuselage with fiberglass 50 g

wing slats - 50 g fiberglass both sides in vacuum

covering film applied directly on fiberglass surface.
then it will be just clearcoated

stripes stickers put on rudder and elevator before clearcoat

fuselage and elevator clearcoated

paper kit for seats

wing parts glued with PU glue

wires for main wing lights

use two layers of 150-200 g fiberglass cloth and strong carbon roving for both sides of balsa wing cover !

cover wings with light balsa 2mm

main wing light installed

glued with PU

use plastic casing 4/3mm

aileron core with hinges - then cover aileron with light balsa 1,5 mm

flap core with hinges - then cover flap with light balsa 1,5 mm

elevator servos installed

wingspan: 3,95 m • lenght: 2,7 m • engine: Fiala VM 250 radial (or at least 160cc) • weight: 20 kg

powerbox will fit under front chair

Fiala VM 250 radial

.. just for transport

wingspan: 3,95 m • lenght: 2,7 m • engine: Fiala VM 250 radial (or at least 160cc) • weight: 20 kg
